

## SUPPLEMENTARY MATERIAL

**Figure S1. Expression of Fibrinectin and Tenascin1 gene in the young and old adipose tissue.** Data represented in bar diagrams are mean  $\pm$  SD value of relative mRNA expression from three independent experiments where total RNA was extracted from gonadal fat pads of young (n=5) and old (n=5) mice. Significance of difference ( $P < 0.05$  or  $P < 0.01$ ) between the means are determined by paired t test.
