

SUPPLEMENTARY FIGURE

Supplementary Figure 1. Effect of DEX at different concentrations on BMDMs viability after incubation for 24h. BMDMs were treated with graded concentrations of DEX (0.01, 0.1, 1, 10, and 100 μ M) for 24h. The cell viability of BMDMs were determined using the CCK-8 assay. n = 3; mean \pm SEM; ** $P < 0.01$.
