

## SUPPLEMENTARY FIGURE

**Supplementary Figure 1. Chaetocin suppresses the growth of ESCC cells.** (A) Chemical structure of chaetocin. (B) Followed by treated with chaetocin at the indicated concentrations for 24 h, CCK8 assay was used to measure the cell viability of ESCC cells. (C) Followed by treated with cisplatin at the indicated concentrations for 24 h, CCK8 assay was used to measure the cell viability of ESCC cells.
